

# Tiankui Zhang

PHD IN COMPUTATIONAL PHYSICS, UNIVERSITY OF ARIZONA, TUCSON AZ, USA

✉ zhang.tiankui@foxmail.com | 🏠 tiankuizhang.github.io | 🌐 tiankuizhang

## Education

### University of Arizona

PHD IN COMPUTATIONAL BIOPHYSICS, GPA: 4.0/4.0

- Advisor: Prof. [Charles Wolgemuth](#)

*Tucson, AZ, USA*

*Aug 2014 - July 2020*

### Wuhan University

BACHELOR OF SCIENCE IN PHYSICS, GPA: 3.85/4.0

- Top-Notch Students Scientific Development Program (Physics)
- Advisor: Dr. [Eugene Lim](#) (King's College London)

*Wuhan, Hubei, PRC*

*Sep 2010 - May 2014*

### King's College London

INTERNATIONAL STUDENT EXCHANGE PROGRAM

*London, UK*

*Sep 2013 - May 2014*

## Experience

### Poissonsoft

SOFTWARE DEVELOPMENT ENGINEER : MAINTAIN AND DEVELOP ALGORITHMS FOR GEOMETRIC KERNEL

- local operation : face taper, body taper
- boundary representation topology editing : redundant topology controlling

*Shang Hai, PRC*

*Feb 2025 - Now*

### ShangHai Xindi

SENIOR RESEARCHER : DEVELOP FEATURE COMMANDS FOR CAD SOFTWARE

- offset curves : computing offset of connected curves
- bridge surface : generate geometric continuous b-spline surface between two existing surface
- surface fairing : optimize control points of b-spline surface to minimize energy
- fit curve : create b-spline curves with interpolation as well as approximation conditions
- boundary blend : create b-spline surface from surface boundary conditions
- draft offset : make offset of faces and create drafted side faces

*Shang Hai, PRC*

*Jun 2023 - Jan 2025*

### Glodon

SOFTWARE DEVELOPMENT ENGINEER : DEVELOP ALGORITHMS TO SOLVE GEOMETRICAL PROBLEMS

- silhouette curves : create silhouette curves from face or mesh
- facet of boundary representation model : adaptive watertight mesh generation from boundary representation model for viewing as well as computation

*Shang Hai, PRC*

*Sep 2020 - Jun 2023*

### University of Arizona

RESEARCH ASSISTANT AND TEACHING ASSISTANT

- Served as teaching assistant for various undergraduate physics and astronomy courses
- Use differential geometry and variational principle to develop partial differential equations governing dynamics of energy minimized elastic surface of Helfrich type
- design and implement a sixth-degree accurate algorithm for Hamilton-Jacobi equation with level set defined boundary conditions
- use Matlab and CUDA c++ to developed a three dimensional massively parallel numerical framework for the simulation of single phase and biphasic vesicles coupled with protein kinetics with professor Charles W. Wolgemuth. Speaking more mathematically, we solve the level set equation in 3 dimensional space coupled with diffusion-convection equations on a 2 dimensional manifold.

*Tucson, AZ, USA*

*Aug 2014 - Jul 2020*

## Skills

### computer

- Proficient in programming with C++, Matlab, CUDA
- Numerical Methods for PDEs: level set, finite volume

### Applied Mathematics

- Computational geometry: solid modelling, b-spline curves and surfaces, mesh generation
- Theoretical Knowledge: physics, differential geometry, convex optimization

### Languages

- Chinese — native
- English — full professional proficiency

## Publication
